## project pattern #93

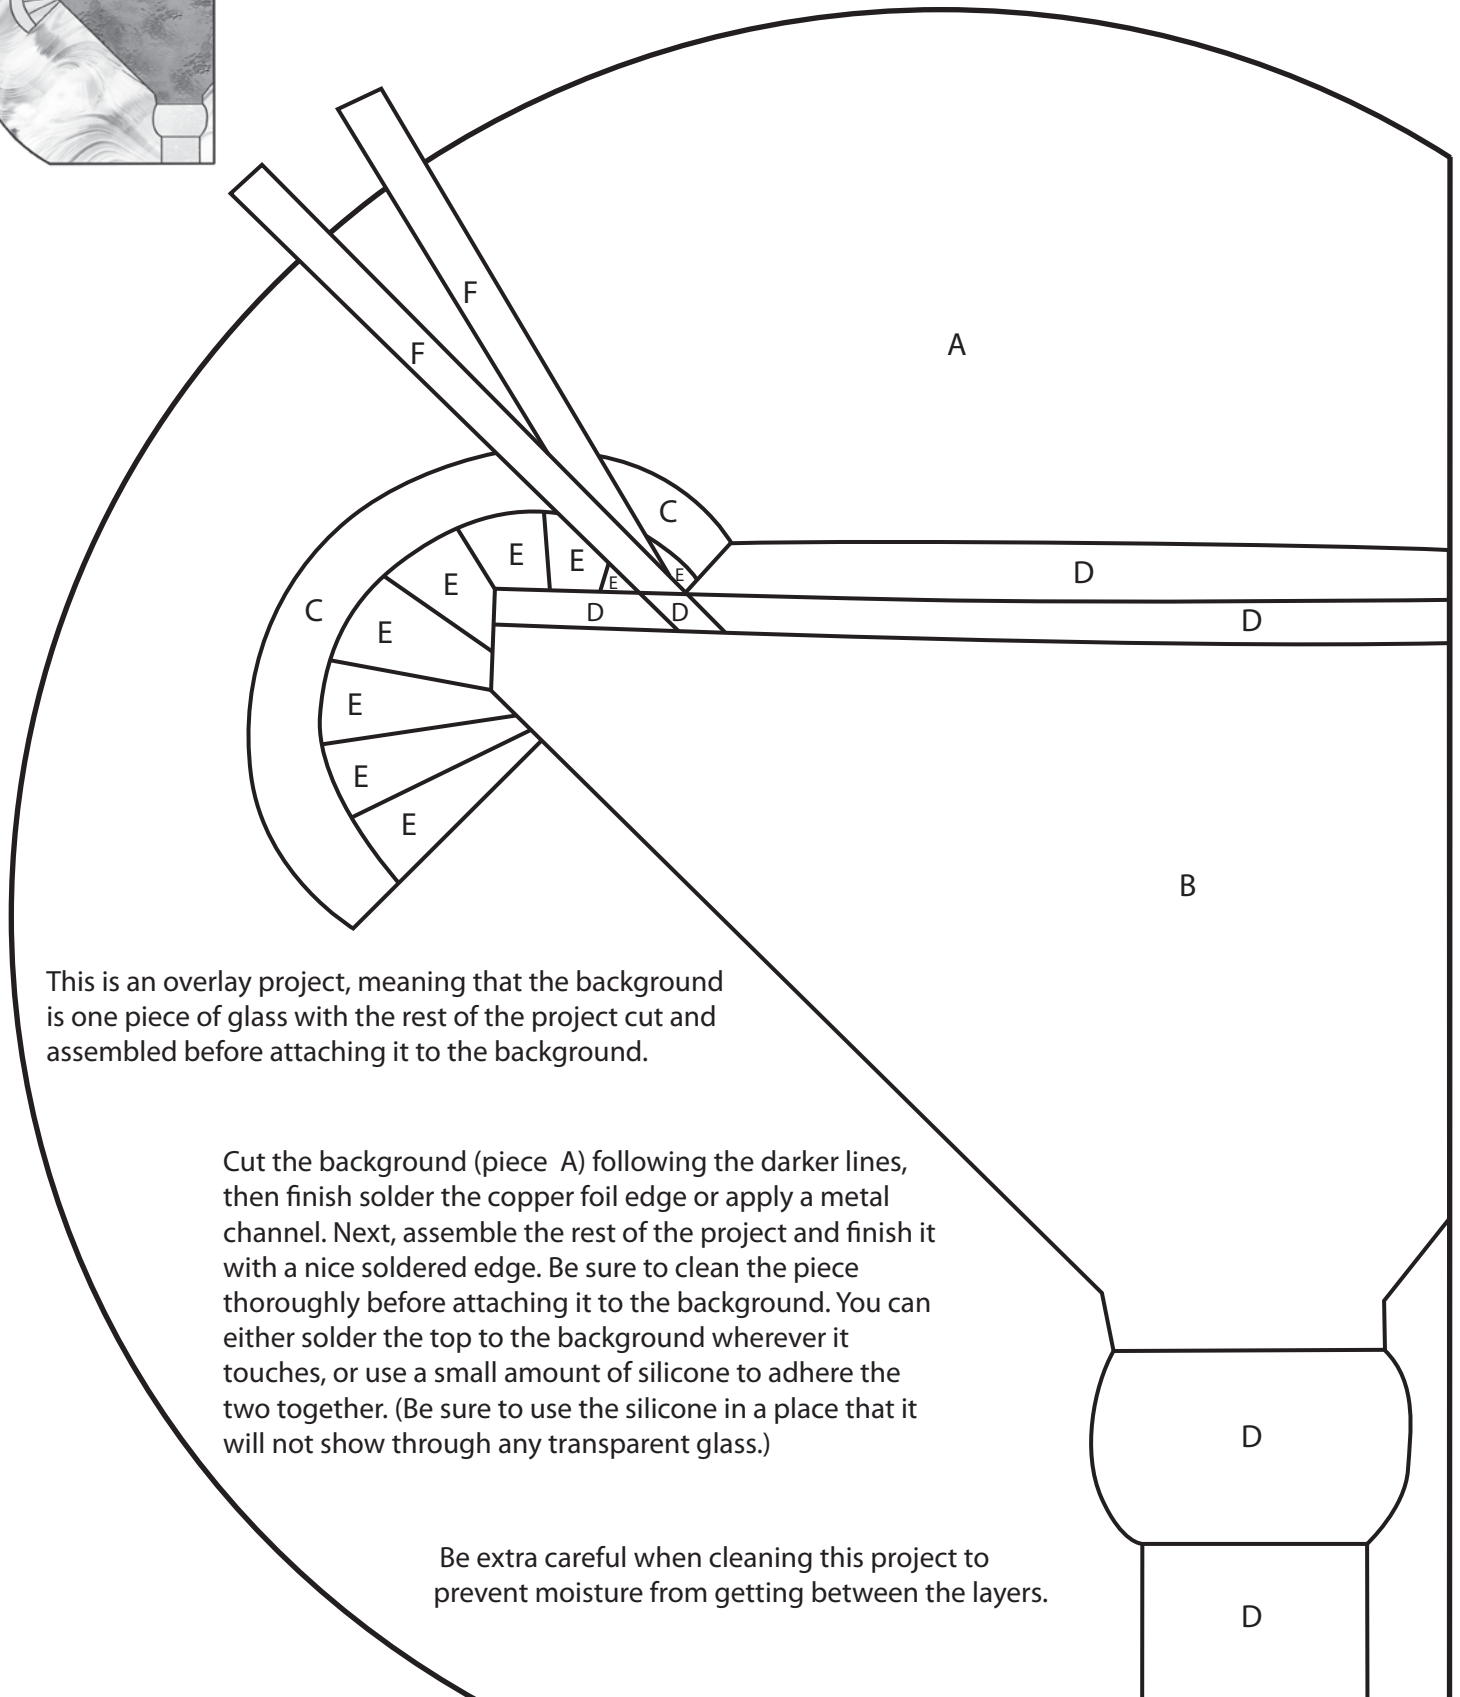

## It's 5:00 Somewhere

### Glass

A) 1 square foot

B) 1/2 square foot

C-F) <1/2 square foot each

This is an overlay project, meaning that the background is one piece of glass with the rest of the project cut and assembled before attaching it to the background.

Cut the background (piece A) following the darker lines, then finish solder the copper foil edge or apply a metal channel. Next, assemble the rest of the project and finish it with a nice soldered edge. Be sure to clean the piece thoroughly before attaching it to the background. You can either solder the top to the background wherever it touches, or use a small amount of silicone to adhere the two together. (Be sure to use the silicone in a place that it will not show through any transparent glass.)

Be extra careful when cleaning this project to prevent moisture from getting between the layers.
